**Opaque to Opaque** – One or more above-ground opaque building envelope assemblies are permitted to be less than required, provided one or more above-ground opaque building envelope assemblies are increased to more than required.

- Walls and joist type roofs must maintain minimum 55% of the required  $RSI_{eff}$
- All other assemblies must maintain minimum 60% of the required  $RSI_{eff}$
- The sum of the areas of all traded assemblies divided by their  $RSI_{eff}$  must be less than or equal to what it would have been if all assemblies had met NBC 9.36.2.6.

**Transparent to Transparent** – One or more windows are permitted to be less than required, provided one or more windows are increased to be more than required.

- The traded windows must have the same orientation.
- The sum of the areas of all traded windows divided by their  $RSI_{eff}$  must be less than or equal to what it would have been if all windows had met NBC 9.36.2.7.

**Opaque to Transparent** – This option is meant to allow reduced insulation for factory-constructed buildings with a low floor to ceiling height and a fenestration and door area to gross wall area ratio of 15% or less.
